

PATENT
AMENDMENT

IN THE SPECIFICATION:

Please amend the paragraph beginning on page 3, line 1 to read as follows:

Accordingly, one aspect of the present invention is a method for managing handwritten notations on paper documents. One embodiment of this method comprises capturing a first image of a first paper document and detecting whether the first image contains a handwritten notation. This embodiment may further comprise printing the first image only if the first image contains at least one handwritten notation, generating and printing location summary information for the handwritten notation, printing the location information, superimposing a margin mark onto the first image adjacent to the handwritten notation, and comparing the first image to a second image stored in memory. This method may also be embodied as a computer program product.
